

## Biology & Art as Tools for Amphibian and Biodiversity Conservation

*Pedro Peloso, PhD*

Lecturer & Research Associate  
Department of Biological Sciences  
Cal Poly Humboldt

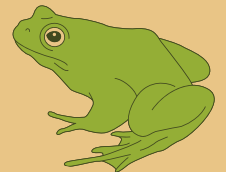

**FRIDAY, October 17, 2025 6:30-8PM**

At the Natural History Museum Classroom (behind the museum)

The Natural History Museum presents: Biology & Art as Tools for Amphibian and Biodiversity Conservation. A talk on the diversity of frogs in the Amazon and the decline of amphibians. Research Associate of Cal Poly Humboldt, Dr. Peloso has spent decades documenting and protecting these species, combining science, art, and storytelling to raise awareness and inspire action. This talk will guide us through a journey of over 20 years documenting biodiversity leading to his most recent accomplishment: **EXTINTOS**, an international exhibition featuring Dr. Peloso's photography and illustrations by young artists, highlighting species that may soon be lost forever.

*Amphibians are disappearing faster than almost any group on Earth. Brazil is home to the greatest diversity of amphibians.*
