Drifters of Wigi: The Tiny Life Forms That Keep Our Bay Thriving

Lorena Dominguez

Student/Marine Biology
Department of Biological Sciences
Cal Poly Humboldt

FRIDAY, May 30, 2025 6:30-7:30PM

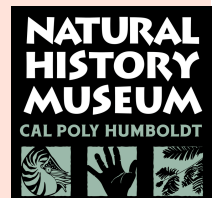

Join us to learn about plankton, a tiny drifting organisms that play a big role in ocean health. During this talk, you will see projections of live samples of the ocean's microscopic world. The importance of observing and documenting our local plankton population through community science will be highlighted during this presentation.

Lorena Dominguez is a current marine biology student at Cal Poly Humboldt. She has been sampling plankton for the National Centers for Coastal Ocean Science's Plankton Monitoring Network since 2019. She is now helping the Northcoast Environmental Center establish a sampling site on Wigi (Humboldt Bay).
