

# REWILDING: NATIVE GARDENING FOR THE PACIFIC NORTHWEST AND NORTH COAST

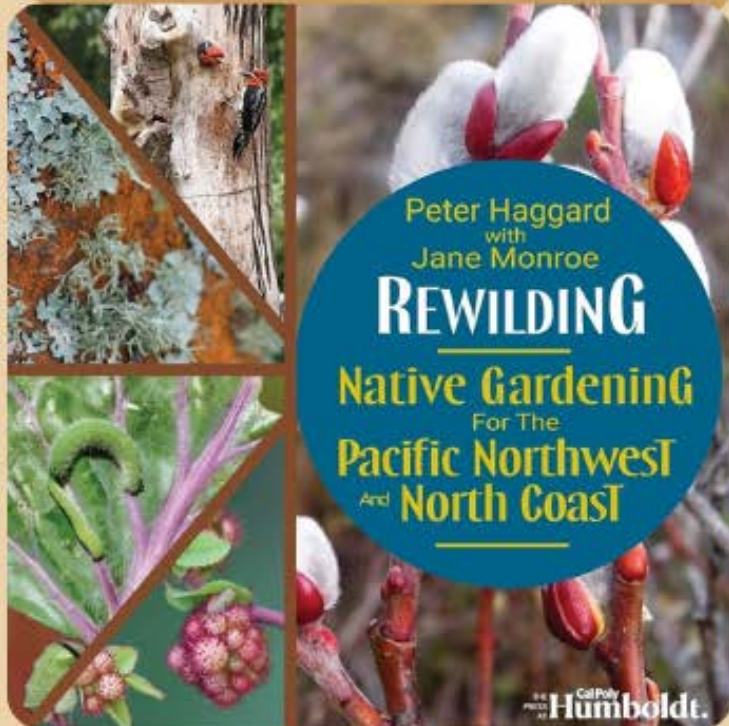

Peter Haggard & Jane Monroe will discuss the process of converting (sub)urban yards into habitat for native plants and wildlife and why rewilding is important. The most effective way to protect and encourage biodiversity is to start locally. Every neighborhood: gardens, lawns, parks, and community gardens can all be rewilded. Yard by yard, we can change the world

Natural History Museum  
Classroom located in the back  
of the Museum

Donations are Welcome!

Peter Haggard worked for the Humboldt County Agricultural Commissioner's Office as an Agricultural Inspector/Biologist for 35 years. He is coauthor, with Judy Haggard, of *Insects of the Pacific Northwest*. Since 1977, he's been landscaping his garden using native plants to attract endemic wildlife.

Jane Monroe has worked as a biologist, conducting habitat reviews for northern California plant and animal species. She also worked as a lecturer at CPH, where she taught various labs or courses in general zoology, general biology, human biology, physiology, ecology, and freshwater invertebrates.
